CASE STUDY:Warehouse Robot Scheduling – Policy Iteration

CODE:

```
states = ["Idle", "Working"]
actions = ["Work", "Charge"]
gamma = 0.9
policy = {s: "Work" for s in states}
V = {s: 0 for s in states}
for _ in range(10):
 for s in states:
  V[s] = 5 + gamma * V[s]
 for s in states:
  policy[s] = "Work" if V[s] > 2 else "Charge"
print("Optimal Warehouse Robot Policy:", policy)
```

OUTPUT:

```
Optimal Warehouse Robot Policy: {'Idle': 'Work', 'Working': 'Work'}
```
